COMPLETION DATE

July 2011

SIZE

33,000 SF

- After an intensive prequalification process, the Boeing Company selected Mashburn to build the new Site Services building at the new Dreamliner manufacturing facility.
- The LEED Silver facility provides space for offices, data-server rooms, maintenance and other site support services.
- The building is engineered as 2 sections: the High bay section is a pre-engineered steel building with two 5-ton bridge cranes. The remainder of the building is a steel-framed structure, with pre-cast wainscoat walls and thermally insulated metal siding.
- The project was completed within a compressed 7-month time frame.
